SUMMONS

TO THE ABOVE-NAMED DEFENDANTS:

You are hereby summoned and required to serve upon Plaintiff's attorneys an answer to the Complaint in this action within twenty (20) days after the service of this Summons, exclusive of the day of service, or within thirty (30) days after service is complete if this Summons is not personally delivered to you within the State of New York. In the case of your failure to answer or appear, judgment will be taken against you by default for the relief demanded in the Complaint.

The basis of the venue designated is New York County because: (i) a substantial portion of the transactions and wrongs complained of occurred in this County; (ii) Defendants have employees based in this County; (iii) Defendants have received substantial compensation in this County by engaging in numerous activities and conducting business, which had an effect in this County.

CLASS ACTION

COMPLAINT FOR VIOLATIONS
OF THE SECURITIES ACT OF 1933

DEMAND FOR JURY TRIAL

Plaintiff Jeeun Friel, individually and on behalf of all others similarly situated, brings this action against Defendants Dapper Labs, Inc. (“Dapper Labs”), and Roham Gharegozlou (“Gharegozlou”). Plaintiff’s allegations are based on personal knowledge as to herself and her own acts, and upon information and belief as to all other matters based on the investigation conducted by and through Plaintiff’s attorneys, which included, among other things, a review of press releases, media reports, websites, and other publicly available reports and information about Defendants. Plaintiff believes that substantial additional evidentiary support will exist for the allegations set forth herein, after a reasonable opportunity for discovery. Plaintiff hereby alleges as follows:

INTRODUCTION

1. Within the Class Period, which is from June 15, 2020, through the present (the “Class Period”), Defendants Dapper Labs and Gharegozlou operated an application called NBA Top Shot that promoted, offered, and sold securities known as NBA Top Shot Moments (or “Moments”), throughout the United States, in violation of federal securities laws.

2. The Moments are a type of digital asset known as a non-fungible token (“NFT”). In this case, the NFTs depict video clips of highlights from NBA basketball games. The NFTs exist on a “blockchain,” which is a decentralized digital ledger that records transactions of digital assets. Assets that reside on a blockchain are sometimes referred to as “crypto assets.”

3. There are various kinds of digital “crypto assets,” including cryptocurrencies like Bitcoin and Ethereum. Bitcoin and Ethereum are commodities, not securities, because they are decentralized means of exchange. The price of bitcoin, for example, is subject only to market forces. There is no “Bitcoin Incorporated” managing the project.

4. Other types of digital assets, however, derive their value from the success or failure of a given project, promoter, or start-up. Investors purchase this type of digital asset with the hope that its value will increase in the future as the project grows in popularity, based upon the managerial efforts of the issuer of the asset or token and those working to develop the project. Because this type of digital asset is properly classified as a security under federal law, the issuers of this type of token, including Defendants, are required to file registration statements with the U.S. Securities and Exchange Commission (“SEC”), and comply with federal securities laws. Defendants failed to do so. By selling these unregistered securities to investors, Defendants reaped hundreds of millions of dollars in profits.

5. Moreover, Defendants used their control over NBA Top Shot to prevent investors from withdrawing their funds for months on end. By preventing investors from “cashing out,” Defendants ensured that money stayed on the platform, propping up the market for Moments as well as the overall valuation of NBA Top Shot.

6. As a result of Defendants’ issuance, promotion, and sale of unregistered securities, Plaintiffs and the Class – many of whom are retail investors who lack the technical and financial sophistication necessary to have evaluated the risks associated with their investment in Moments,

and were denied the information that would have been contained in the materials required for the registration of the Moments – have suffered significant damages in an amount to be proven at trial.

PARTIES

7. Plaintiff Jeeun Friel is a resident of Crozet, Virginia. Friel and members of the Class purchased Moments, unregistered securities, during the Class Period.

8. Defendant Dapper Labs is a corporation based in Vancouver, Canada. Dapper Labs is a blockchain-focused technology company. Dapper Labs has several employees based in New York and has partnered with the NBA, which is headquartered in New York, in launching NBA Top Shot and engaging in the wrongful conduct complained of herein.

9. Defendant Roham Gharegozlou is the founder and Chief Executive Officer (“CEO”) of Dapper Labs.

JURISDICTION AND VENUE

10. The claims alleged herein arise under Sections 5, 12(a)(1) and 15 of the Securities Act, 15 U.S.C. §§ 77e, 77l(a)(1), 77o, and this Court has original subject matter jurisdiction of these claims.

11. This Court also has jurisdiction over the subject matter of this action pursuant to Section 22 of the Securities Act. Section 22 of the Securities Act expressly prohibits removal of this action to federal court. *See Cyan, Inc. v. Beaver Cty. Emps. Ret. Fund*, 138 S. Ct. 1061, 1075 (2018).

12. The Court has personal jurisdiction over the Defendants under C.P.L.R. §§ 301 and 302, and venue is proper in this County pursuant to § 22 of the Securities Act and C.P.L.R. § 503. The Defendants conducted business in this County, have employees based in this County, and in launching NBA Top Shot have partnered with the NBA, which is based in this County.

BACKGROUND

Bitcoin: The First Cryptocurrency

13. Cryptocurrencies are digital assets designed to function as a medium of exchange, a store of value, or both. Cryptocurrencies rely on a variety of cryptographic principles to secure transactions, control the creation of additional units, and authenticate the transfer of digital assets.

14. Bitcoin was the world's first cryptocurrency. It is also the world's largest and most popular cryptocurrency, with a market capitalization over \$1 trillion. Bitcoin is the fastest asset to reach a \$1 trillion market capitalization, which it achieved in only twelve years. (Because the term "bitcoin" can refer to the system as well as the unit of exchange, the accepted practice is to use "Bitcoin" to refer to the system, and "bitcoin" to refer to the units of exchange or currency.)

15. At the core of Bitcoin is a public ledger that tracks the ownership and transfer of every unit of bitcoin. The ledger is known as a blockchain.

16. Blockchains stand at the core of many crypto assets. While their technical protocols may vary, blockchains are generally designed to achieve the similar goals of decentralization and transparency.

17. Accordingly, blockchains are designed as a framework of incentives that encourages people to do the work of validating transactions. In the case of Bitcoin, those engaged in the validation must solve a "Proof of Work" mathematical problem by expending computational resources. The first person to solve the "Proof of Work" problem is rewarded in newly minted bitcoin. This process is known as "mining" bitcoin.

18. Mining is one method of acquiring cryptocurrencies like bitcoin. Another is simply to buy cryptocurrencies from another party, typically on an online cryptocurrency exchange.

19. While bitcoin was the only cryptocurrency listed on the exchanges shortly following

its creation in 2009, there are now thousands. Following the surge in cryptocurrency interest in recent years, the daily trading volume of major cryptocurrencies has reached \$62.5 billion.

20. Bitcoin is a commodity, and not a security, because it allows for fast and secure transactions, can serve as a long-term store of value, and is decentralized. Critically, Bitcoin is free from any government or private control. There is no entity behind Bitcoin that can cause the price of a bitcoin to increase through prudent management or decrease through mismanagement. Rather, the cost of bitcoin is determined solely by market forces, and one buying bitcoin is not investing in a common enterprise. The Commodity Futures Trading Commission (“CFTC”) and a number of courts have recognized that bitcoin is a commodity. Likewise, the Chair of the SEC has acknowledged that bitcoin is not a security.

Ethereum: The Addition of Smart Contract Functionality

21. Ethereum is the second-most popular cryptocurrency, with a market capitalization that is currently over \$300 billion. Ethereum uses a blockchain similar to that used by Bitcoin. Like Bitcoin, Ethereum uses “miners” to act as the validators of transactions on its network, and these miners solve complicated math problems in exchange for newly minted units of currency, in this case called units of “ether.” Also like Bitcoin, Ethereum is a commodity rather than a security.

22. Unlike Bitcoin, however, Ethereum was designed to enable “smart contract” functionality. A smart contract is code that verifies and enforces the negotiation or performance of a contract. Smart contracts can be self-executing and self-enforcing, potentially lowering the transaction costs associated with traditional contracting.

23. There are many uses for smart contracts. For example, two parties might enter into a hedging contract where both parties put up \$1,000 worth of ether. The parties might agree that, in a month, one of them will receive \$1,000 worth of ether at the dollar exchange rate at that time, while the other party receives the rest. Alternatively, a smart contract might be programmed to release

funds only at a certain time, similar to a traditional escrow agreement.

CryptoKitties: Dapper Labs' Debut

24. Smart contracts, it turns out, can also be used to breed and collect digital cats called “CryptoKitties.”

25. In November of 2017, Dapper Labs released its first product, CryptoKitties, which used the smart contract functionality of the Ethereum blockchain to allow users to breed and collect digital cats with a variety of characteristics.

26. CryptoKitties quickly caught on. In fact, CryptoKitties was so popular that it resulted in a highly publicized slowdown of the entire Ethereum blockchain, which relies on Proof-of-Work mining and must therefore process each transaction with a complex math problem. For example, Bloomberg reported on December 4, 2017 that “CryptoKitties mania overwhelms Ethereum network’s processing.” BBC News reported the following day that “CryptoKitties Craze slows down transactions on Ethereum.”

27. Dapper Labs, and its CEO Gharegozlou, had learned an important lesson: In order to leverage blockchain technology to support a craze on the scale of CryptoKitties, it would not be feasible to rely on a blockchain that used “Proof of Work” math problems to process transactions. Something else would be required.

28. As Dapper Labs CEO Gharegozlou put it in an interview with USA Today:

We’ve been working on Flow for a long time. In November of 2017, we released CryptoKitties. By Dec. 1, everything was on fire and we starting to work on a scaling solution. It was (chief technology officer Dieter Shirley’s) job from December to May 2019, when we decided ‘We got to build Flow,’ it was like ‘What do we do?’

Flow: Dapper Labs' Blockchain of the Future

29. In September of 2019, Dapper Labs announced that it was developing Flow, a new blockchain that relies not on Proof-of-Work mining, but on a technique known as Proof-of-Stake.

30. Blockchains that use the Proof-of-Stake technique still rely on miners to verify transactions on the public ledger, but mining power is determined by the amount of tokens a miner owns, rather than the miner's solving of a math problem.

31. To make its new blockchain function, then, Dapper Labs needed to create and distribute a token. The blockchain works by users staking their tokens to validate transactions, and then earning additional tokens as a reward.

32. Dapper Labs created the Flow token as a native currency for the Flow blockchain, and has distributed the Flow token in a variety of sales since 2020. Dapper Labs' distribution of Flow tokens qualifies as a securities offering under the securities laws.

33. Dapper Labs appears to understand this. In discussing token distribution, the Flow website claims to be "commit[ed]" to "compliance with securities laws." In addition, because Dapper Labs has not registered the Flow token as a security under the Securities Act, it has restricted the public sales and auctions of Flow tokens to non-United States persons, as selling the token to United States investors would constitute an unregistered securities offering.

34. Dapper Labs announced in 2019 that it was teaming up with the NBA to launch a digital platform for blockchain-based digital assets known as NBA Top Shot.

35. NBA Top Shot does offer these digital assets, known as Moments, to United States investors and in fact has sold over \$500 million worth of them. As detailed below, these Moments are securities under the securities laws.

FACTUAL ALLEGATIONS

NBA Top Shot Moments

36. First announced in July 2019 as a joint venture between Dapper Labs, the NBA and the NBA Players Association ("NBPA"), NBA Top Shot is a platform built on Dapper Labs' Flow blockchain that allows investors to purchase virtual assets known as "Moments."

37. NBA Top Shot launched what is known as a “closed beta” on June 15, 2020, making Moments available to a select list of individuals. NBA Top Shot launched its “open beta” on October 1, 2020, making Moments available to the public at large. Moments have been on sale ever since.

38. After the NBA, the NBPA and Dapper Labs all agree that a certain video highlight should become a Moment, Dapper Labs “mints” the highlight into an NFT, creating a unique digital asset that is recorded on the Flow blockchain.

39. One can think of the minting process as imprinting the NFT with its own serial number or barcode. The minting process also creates the beginning of the record associated with the NFT. Ownership, transfers, and prices will be recorded permanently on the blockchain. While editions of Moments are minted from the same basketball play, NFTs are, by nature, unique.

40. While an owner of a Moment owns the NFT as reflected on the blockchain, the owner does not acquire any intellectual property rights or rights to the underlying NBA highlight.

41. NBA Top Shot sells digital “packs” of Moments, the prices of which vary based on scarcity. There are three tiers of packs generally available: (1) Common: nine common Moments, which have production of over 1,000 with no maximum; (2) Rare: seven common Moments and one rare Moment, with a maximum production of 999; and (3) Legendary: six common Moments, one rare Moment, and one legendary Moment, with a maximum production of 99. NBA Top Shot sometimes releases other types of packs as well, such as Rising Stars packs or Deck the Hoops packs in honor of the holiday season.

42. NBA Top Shot creates scarcity in another way too. There are not unlimited packs available. Rather, the packs are released in limited size “drops” that can and often do sell out. Investors must wait in a virtual queue to buy them while supplies last.

43. In addition to buying packs, there is another way to acquire Moments. Moments can

trade in the Marketplace – created and controlled by Defendant Dapper Labs – where individuals can buy Moments from other individuals. The prospect of acquiring a Moment in a pack from NBA Top Shot and then re-selling the Moment for a huge profit in the Marketplace, or buying a Moment in the Marketplace and then turning around and selling it for more, has provided the impetus behind the current surge in demand for Moments.

44. For example, a recent article on the NBA Top Shot craze discusses an investor named Michael Levy, who owns the second-most-valuable collection of Moments, worth \$15.6 million, according to a valuation service that specializes in valuing Moments. The article interviews another investor named Jesse Schwarz, who set a record in February, 2021, by buying a Moment of a LeBron James dunk on the Marketplace for \$208,000:

“These are investments,” he [Schwarz] says. “That LeBron that I bought for \$208,000 was worth seven figures right away. And, that’s a big reason why I bought it.”

45. Another article reported that the combined market capitalization of NBA Top Shot Moments had reached \$1.9 billion in late February of 2021, which is greater than the median value of an NBA franchise.

46. NBA Top Shot generates revenue from selling Moments, and also receives a 5% transaction fee on all transactions that occur in the secondary Marketplace. Dapper Labs also takes a cash-out fee when users try to transfer the balance from their Dapper wallet to their bank account.

47. Other than in the secondary Marketplace, which is part of the NBA Top Shot platform, controlled by Dapper Labs, and where all transactions generate additional revenue for NBA Top Shot, there is no other way for individuals to sell their Moments.

The Moments are Securities

48. NBA Top Shot Moments are securities because they constitute an investment of money in a common enterprise with a reasonable expectation of profits to be derived from the

efforts of others.¹

49. On April 3, 2019, the SEC published a “Framework for ‘Investment Contract’ Analysis of Digital Assets,” in which it “provided a framework for analyzing whether a digital asset is an investment contract and whether offers and sales of a digital asset are securities transactions.” NBA Top Shot Moments are securities under that Framework.

50. In that Framework, the SEC cautioned potential issuers: “If you are considering . . . engaging in the offer, sale, or distribution of a digital asset, you need to consider whether the U.S. federal securities laws apply.” The SEC went on to explain the basics of the *Howey* test:

The U.S. Supreme Court’s *Howey* case and subsequent case law have found that an “investment contract” exists where there is the investment of money in a common enterprise with a reasonable expectation of profits to be derived from the efforts of others. The so-called “*Howey* test” applies to any contract, scheme, or transaction, regardless of whether it has any of the characteristics of typical securities. The focus of the *Howey* analysis is not only on the form and terms of the instrument itself (in this case, the digital asset) but also on the circumstances surrounding the digital asset and the manner in which it is offered, sold, or resold (which includes secondary market sales). Therefore, issuers and other persons and entities engaged in the marketing, offer, sale, resale, or distribution of any digital asset will need to analyze the relevant transactions to determine if the federal securities laws apply.

51. Investors who bought Moments invested money or other valuable consideration in a common enterprise – NBA Top Shot and, by extension, Dapper Labs and its Flow blockchain. Investors had a reasonable expectation of profit based on the efforts of Dapper Labs.

Moment Purchasers Invested Money

52. Investors purchasing Moments made an investment of money or other valuable consideration for the purposes of the *Howey* test. As the SEC states in its Framework: “The first prong of the *Howey* test is typically satisfied in an offer and sale of a digital asset because the digital asset is purchased or otherwise acquired in exchange for value, whether in the form of

¹ See *SEC v. W.J. Howey Co.*, 328 U.S. 293 (1946).

traditional (or fiat) currency, another digital asset, or other type of consideration.”

Moment Investors Participated in a Common Enterprise

53. The SEC Framework states: “In evaluating digital assets, we have found that a ‘common enterprise’ typically exists.” This is “because the fortunes of digital asset purchasers have been linked to each other or to the success of the promoter’s efforts.”

54. This is true of Moment investors. Investors who buy Moments are passive participants in the enterprise, with the profits of each investor intertwined with the fate of NBA Top Shot and the Flow blockchain on which it sits. Unlike bitcoin, which is decentralized, here Dapper Labs controls the enterprise, sharing in the profits and risks of this venture. Accordingly, investors in Moments participated in a common enterprise.

Moment Investors Purchased with a Reasonable Expectation of Profit

55. In terms of “reasonable expectations of profits,” the SEC Framework states: “A purchaser may expect to realize a return through participating in distributions or through other methods of realizing appreciation on the asset, such as selling at a gain in a secondary market.”

56. In particular, the SEC’s Framework identifies a number of factors to help assess whether the “reasonable expectation of profits” element is met:

The more the following characteristics are present, the more likely it is that there is a reasonable expectation of profit:

The digital asset gives the holder rights to share in the enterprise’s income *or profits or to realize gain from capital appreciation of the digital asset.*

The opportunity may result from appreciation in the value of the digital asset that comes, at least in part, from the operation, promotion, improvement, or other positive developments in the network, particularly if there is a secondary trading market that enables digital asset holders to resell their digital assets and realize gains.

This also can be the case where the digital asset gives the holder rights to dividends or distributions.

The digital asset is transferable or traded on or through a secondary market or platform, or is expected to be in the future.

Purchasers reasonably would expect that an AP's [Active Participant, or promoter] efforts will result in capital appreciation of the digital asset and therefore be able to earn a return on their purchase.

The digital asset is offered broadly to potential purchasers as compared to being targeted to expected users of the goods or services or those who have a need for the functionality of the network.

(Emphasis added.)

57. Investors in Moments are clearly expecting profit. As investor Jesse Schwarz said of his record-setting LeBron James Moment:

"These are investments," he [Schwarz] says. "That LeBron that I bought for \$208,000 was worth seven figures right away. *And, that's a big reason why I bought it.*"

(Emphasis added)

58. Schwarz also explained how similar he sees investing in Moments to investing on Wall Street:

Schwarz says that investing in Top Shot Moments is a lot like investing in stocks. "There's a lot of psychology behind it," he says. "It's not only about what the best company or best player is. It's about understanding what's baked into the price and what other people aren't seeing." Although, in the case of LeBron James, his greatness is part of what creates the value.

59. In an article in March 2021, the former Chief of the SEC's Office of Internet Enforcement observed that Moment investors are seeking profits, regardless of any fine print that Dapper Labs might slip into the User Agreement:

Buried in its Service Terms of Use, Dapper requires its users to agree that they "are using NFTs primarily as objects of play and not for investment or speculative purposes." *This provision would be laughable were it not so disturbingly contradictory and absurdly self-serving.*

The reality is that the growing fanatical NBA Top Shot database is all about the investment, speculation and appreciation of the Top Shot NFTs and the

NBA Top Shot Marketplace. With its varying levels of scarcity and its legion of clamorous promoters, NBA Top Shots reinforces these notions exponentially. This is precisely why investors are not the only ones fawning over NFTs, and other capital market participants are buying into the hype as well.

(Emphasis added.)

60. Accordingly, Moment investors have a reasonable expectation of profit.

Moment Investors Expected Profits to be Derived from the Managerial Efforts of the Issuers

61. The SEC Framework provides that the “inquiry into whether a purchaser is relying on the efforts of others focuses on two key issues: Does the purchaser reasonably expect to rely on the efforts of an [Active Participant]? Are those efforts ‘the undeniably significant ones, those essential managerial efforts which affect the failure or success of the enterprise,’ as opposed to efforts that are more ministerial in nature?”

62. The SEC Framework continues:

Although no one of the following characteristics is necessarily determinative, the stronger their presence, the more likely it is that a purchaser of a digital asset is relying on the “efforts of others”:

An AP is responsible for the development, improvement (or enhancement), operation, or promotion of the network, particularly if purchasers of the digital asset expect an AP to be performing or overseeing tasks that are necessary for the network or digital asset to achieve or retain its intended purpose or functionality.

Where the network or the digital asset is still in development and the network or digital asset is not fully functional at the time of the offer or sale, purchasers would reasonably expect an AP to further develop the functionality of the network or digital asset (directly or indirectly). This particularly would be the case where an AP promises further developmental efforts in order for the digital asset to attain or grow in value.

There are essential tasks or responsibilities performed and expected to be performed by an AP, rather than an unaffiliated, dispersed community of network users (commonly known as a “decentralized” network).

An AP creates or supports a market for, or the price of, the digital asset. This can include, for example, an AP that: (1) controls the creation and issuance of the digital asset; or (2) takes other actions to support a market price of the

digital asset, such as by limiting supply or ensuring scarcity, through, for example, buybacks, “burning,” or other activities.

An AP has a lead or central role in the direction of the ongoing development of the network or the digital asset. In particular, an AP plays a lead or central role in deciding governance issues, code updates, or how third parties participate in the validation of transactions that occur with respect to the digital asset.

An AP has a continuing managerial role in making decisions about or exercising judgment concerning the network . . .

(Emphasis added.)

63. Purchasers of Moments are entirely reliant on the managerial efforts of the issuers for their potential profits. The success of NBA Top Shot’s ability to maintain the Moment craze is essentially what controls the investment. This is again unlike an investment in bitcoin, for example, which is decentralized and run by no one other than the market.

64. Moreover, investors in Moments have said as much:

There were some periods early in Top Shot’s lifespan where people questioned whether Dapper Labs was making good decisions with the supply of Moments and whether the website itself would hold up with a larger user base, Levy says. “It’s really exploded and become very, very mainstream,” he says. “So it feels validating to see it all play out the way a lot of us hoped it would.”

(Emphasis added.)

65. Not only are investors in Moments hitching their wagons to the continued success of NBA Top Shot, but also to the Flow blockchain that underlies the platform.

66. Dapper Labs CEO Gharegozlou said during a recent livestream that “The FLOW token is what powers it all, but you don’t need to know that in order to play NBA Top Shot.”

67. While one does not need to know about the Flow token to participate in NBA Top Shot, this does not change the fact that much of the investor interest in Moments is intertwined with interest in Dapper Labs, its burgeoning new blockchain, and the token that “powers it all.”

68. In fact, according to NBA Top Shot’s own website, one of the most common question it gets is for more information about Flow tokens:

FLOW TOKENS

Mosey on over to this preview to learn more about Flow, the blockchain that NBA Top Shot is built on. One of the most common questions we get is for more information about FLOW tokens.

At launch, FLOW will be utility tokens used only to run the network. This will change in the future as the token is more widely adopted, but for the beta period, don't expect to hold FLOW tokens in the Dapper on Flow account for use in NBA Top Shot.

69. Investors' profits in Moments are to be derived from the managerial efforts of others, specifically of Dapper Labs and NBA Top Shot. Most immediately, should Dapper Labs and NBA Top Shot fail to maintain the crazed level of hype and interest in Moments, investor profits will dry up. Secondly, should Dapper Labs fail to deliver on its Flow blockchain, excitement will wane and investor profits will take a hit as well.

Defendants Used Their Control over the Platform to Prevent Investors From Cashing Out

70. After investors purchase a Moment, the ball is in Top Shot's court, so to speak. The investor is entirely reliant on the NBA Top Shot platform to make a profit, by finding a purchaser in the Marketplace and executing a peer-to-peer sale, but also to get one's money out.

71. While NBA Top Shot is very good at taking investors' money, it is less good at giving it back.

72. As has been widely reported, investors are being told to wait *months* before they can cash out.

73. On March 26, 2021, the NBA Top Shot website published an "Update on Withdrawals." The Update attempted to soothe investors by saying that "[t]he money in your Top Shot account is yours," but then continued to explain: "Currently we estimate most accounts will have withdrawals enabled within 6-8 weeks." Even after withdrawals are enabled, the Update stated that "[m]ost withdrawals are processed within 21 days but others may take 40 days or more."

74. According to a recent CNN article entitled, *NBA Top Shot Customers Can't Get*

Their Money Out. Experts are Confounded:

NBA Top Shot is the hottest NFT marketplace on the planet. It's also got a big problem: Customers are complaining about exceptionally long wait times to get paid from sales of digital tokens that can often cost hundreds of thousands of dollars.

...

Vincent Diciglio, a 32-year-old data analyst for Microsoft, told CNN Business that he's been waiting weeks for his wire transfer to go through.

"There's no reason that a company should be worth billions of dollars and can't cover these withdrawals or even have the employees to help move this process along," said Diciglio. "It just doesn't make sense."

The lengthy period for wire transfers even after the six-to-eight-week fraud monitoring period "just doesn't make sense," said Rakhi Talwar, an anti-money-laundering compliance consultant for artwork based in the UK. "Isn't the whole point of these crypto transactions to be instant?"

75. Another article observed: "Millions of dollars slosh through NBA Top Shot each day, but not much money is getting out."

76. Investors have also had their Dapper Labs accounts emptied with no recourse, frozen for no reason, and are being ignored by Dapper Labs all the while.

77. Investors have also watched scarcity, and therefore value, decline when NBA Top Shot decides to give packs away to NBA players or other celebrities or influencers.

78. One article explains:

As demand — and perceived value — of packs increase another frequent criticism from collectors has been packs seemingly set aside before drops. They've noticed unopened packs landing in the hands of NBA players and others to open on livestreams, sometimes hours after pack drops where hundreds of thousands are left out in the cold. Dapper has been more transparent about holding some packs back lately, saying certain amounts are "withheld for community giveaways, customer service and promotional purposes." And Eisenberg [Community Lead at Dapper Labs] admitted that, while players have gotten packs for giveaways and promotions, that's part of the company's strategy.

"We made a conscientious decision not too long ago that if it's an NBA player coming to us wanting to do anything from you know, a pack opening to a giveaway, we're going to help facilitate that," Eisenberg said. "Because at the

end of the day, NBA Top Shot is nothing without the players, the moments they create on the court.”

79. NBA Top Shot might be nothing without the players, but it would also be nothing without investor money, money that NBA Top Shot has been wrongfully retaining for months.

80. Based on an online valuation service, NBA Top Shot insiders appear to be holding large “on paper” profits in their Dapper Labs wallets. In addition, they need money to remain on the platform in order to continue to raise money at a high valuation. If investors pull their money from the platform, the platform will collapse.

81. These are precisely the risks to investors that the securities laws were designed to protect against.

The Class Has Suffered Significant Damages from Defendants’ Actions

82. As a direct result of Defendants’ issuance, promotion, and sale of unregistered securities, Plaintiffs and the Class – many of whom are retail investors who lack the technical and financial sophistication necessary to have evaluated the risks associated with their investments in Moments, and were denied the information that would have been contained in the materials required for the registration of the Moments – have suffered significant damages in an amount to be proven at trial.

CLASS ALLEGATIONS

83. Plaintiff brings this action as a class action on behalf of a class consisting of all persons other than Defendants who purchased or otherwise acquired Moments during the Class Period, and were damaged thereby (the “Class”). Excluded from the Class are Defendants, the officers and directors of Dapper Labs, members of the Defendants’ immediate families and their legal representatives, heirs, successors or assigns and any entity in which the officers and directors of Dapper Labs have or had a controlling interest.

84. The members of the Class are so numerous that joinder of all members is impracticable. As of April 2021, there were over 800,000 users on NBA Top Shot, according to a spokesperson for Dapper Labs. While the exact number of Class members is unknown to Plaintiff at this time and can only be ascertained through appropriate discovery, Plaintiff believes there are thousands of members in the proposed Class. Plaintiff believes that Class members can be identified from records maintained by Defendants, and may be notified of the pendency of this action by mail, using the form of notice similar to that customarily used in securities class actions, including being given an opportunity to exclude themselves from the Class.

85. Plaintiff's claims are typical of the claims of the members of the Class, as all members of the Class are similarly affected by Defendants' wrongful conduct in violation of federal law that is complained of herein.

86. Plaintiff will fairly and adequately protect the interests of the members of the Class and have retained counsel competent and experienced in class and securities litigation.

87. Common questions of law and fact exist as to all members of the Class and predominate over any questions solely affecting individual members of the Class. Among the questions of law and fact common to the Class are:

- a) whether Defendants violated the Securities Act;
- b) whether Moments constitute securities under federal law;
- c) to what extent the members of the Class have sustained damages and the proper measure of damages.

88. A class action is superior to all other methods of fair and efficient adjudication of this controversy since joinder of all members is impracticable. Furthermore, as the damages suffered by individual Class members may be relatively small, the expense and burden of individual litigation make it impossible for members of the Class to individually redress the wrongs done to

them. There will be no difficulty in the management of this action as a class action.

CAUSES OF ACTION

FIRST CAUSE OF ACTION
SECURITIES ACT – PRIMARY LIABILITY
Unregistered Offer and Sale of Securities
Sections 5 and 12(a)(1) of the Securities Act
(Dapper Labs)

89. Plaintiff realleges the allegations above.

90. Section 5(a) of the Securities Act states: “Unless a registration statement is in effect as to a security, it shall be unlawful for any person, directly or indirectly (1) to make use of any means or instruments of transportation or communication in interstate commerce or of the mails to sell such security through the use or medium of any prospectus or otherwise; or (2) to carry or cause to be carried through the mails or in interstate commerce, by any means or instruments of transportation, any such security for the purpose of sale or for delivery after sale.” 15 U.S.C. § 77e(a).

91. Section 5(c) of the Securities Act states: “It shall be unlawful for any person, directly or indirectly, to make use of any means or instruments of transportation or communication in interstate commerce or of the mails to offer to sell or offer to buy through the use or medium of any prospectus or otherwise any security, unless a registration statement has been filed as to such security[.]” *Id.* § 77e(c).

92. When issued, the Moments were securities within the meaning of Section 2(a)(1) of the Securities Act, 15 U.S.C. § 77b(a)(1). Defendant Dapper Labs promoted, solicited or sold Moments to Plaintiffs and Members of the Class. Dapper Labs thus directly or indirectly made use of means or instruments of transportation or communication in interstate commerce or of the mails, to offer to sell or to sell securities, or to carry or cause such securities to be carried through the mails or in interstate commerce for the purpose of sale or for delivery after sale. No registration

statements have been filed with the SEC or have been in effect with respect to the offering described herein.

93. Section 12(a)(1) of the Securities Act provides in relevant part: “Any person who offers or sells a security in violation of section 77e of this title . . . shall be liable, subject to subsection (b), to the person purchasing such security from him, who may sue either at law or in equity in any court of competent jurisdiction, to recover the consideration paid for such security with interest thereon, less the amount of any income received thereon, upon the tender of such security, or for damages if he no longer owns the security.” *Id.* § 77l(a)(1).

94. Accordingly, Dapper Labs has violated Sections 5(a), 5(c), and 12(a)(1) of the Securities Act. *Id.* § 77l(a)(1).

95. Plaintiff and the Class seek rescissory damages with respect to Moments purchased during the Class Period.

SECOND CAUSE OF ACTION
SECURITIES ACT – ADDITIONAL LIABILITY
Control Person Liability for Violations of Sections 5, 12(a)(1)
(Gharegozlou)

96. Plaintiff realleges the allegations above.

97. This Count is asserted against Defendant Gharegozlou for violations of Section 15 of the Securities Act, 15 U.S.C. § 77o.

98. Defendant Gharegozlou, by virtue of his office, agreements and understandings, and specific acts, at the time of the wrongs alleged herein, and as set forth herein, had the power and authority to direct the management and activities of Dapper Labs and NBA Top Shot, and to cause Dapper Labs to engage in the wrongful conduct complained of herein. Defendant Gharegozlou had and exercised the power and influence to cause the unlawful solicitation of Moments as complained of herein.

99. Defendant Gharegozlou had and has the power to direct or cause the direction of the management and policies of Dapper Labs and NBA Top Shot.

100. By virtue of the conduct alleged herein, Defendant Gharegozlou is liable for the wrongful conduct complained of herein and is liable to Plaintiffs and the Class for rescission and/or damages suffered for Moments sold during the Class Period.

PRAYER FOR RELIEF

101. On behalf of herself and the Class, Plaintiff requests relief as follows:

- a) That the Court determine that this action may be maintained as a class action, that Plaintiff be named as Class Representative of the Class, that the undersigned be named as Lead Class Counsel of the Class, and direct that notice of this action be given to Class members;
- b) That the Court enter an order declaring that Defendants' actions, as set forth in this Complaint, violate the federal laws set forth above;
- c) That the Court award Plaintiffs and the Class damages in an amount to be determined at trial;
- d) That the court issue appropriate equitable and any other relief against Defendants to which Plaintiff and the Class are entitled;
- e) That the Court award Plaintiff and the Class pre- and post-judgment interest;
- f) That the Court award Plaintiff and the Class their reasonable attorneys' fees and costs of suit; and
- g) That the Court award any and all other such relief as the Court may deem just and proper under the circumstances.

JURY TRIAL

102. Plaintiff respectfully demands a trial by jury for all claims.
